Adjust Sound to HDMI for Classroom Speakers

These are the steps to change the playback device from Speakers/Headphones to HDMI.

1) First, right-click the speaker icon on the bottom right of your screen.

2) Click Sounds, then click Playback on top tabs like below.

3) The first option should be the HDMI option, it may not look exactly like the icon above, or say “HDMI Device”, but it will say HDMI somewhere in text.

4) Right-click the HDMI option, then select “Set as Default Device”.

5) Once “Set as Default Device” is selected, it should play through the room speakers.
